

CascadiaJS Sponsorship Packages

CascadiaJS (<http://cascadiajs.com>) is a two day community run developer conference focused on the cutting-edge of Javascript technology. The topics will run the gamut: client/web, server-side (Node.js) and OS (Win8).

There will be 200 attendees, drawing primarily from Portland, Seattle and Vancouver. We expect to sell out quickly once tickets go on sale.

Sponsorships are limited. Since this is an all-volunteer event, the only purpose of the sponsorship funds is to fund T&E for the speakers and to provide an amazing educational and fun experience for the attendees. As soon as these needs are covered, we will not accept any more sponsorship proposals.

Concept

The world of Javascript has moved beyond the browser. Node.js has taken server-side application developers by storm and help to blur the line between website and web application. Windows 8 is the first major operating system to make JS a first-class citizen when developing native applications. Mozilla is pushing the boundaries of mobile by creating a Firefox OS, a mobile OS that is fully powered by the web. This conference will bring together all of these topics, and more, in order to survey where JS is today and where it is going tomorrow.
